

## **Project Manager-Product Services (Midwest Location)**

A leader among equipment manufacturers (OEMs) in the networking, medical, computer and industrial electronics industries has engaged JTL Services, Inc. on a search for a Project Manager (Product Services). Our client's product realization services include: product development, printed circuit board development, new product introduction, prototyping, assembly, testing, manufacturing, final system box build and sustaining services.

### **Job Overview**

Our client company is currently seeking a Product Services Development Project Manager to drive technically challenging projects in a fast-paced and customer diversified environment. This Project Manager will lead project teams that perform development within the disciplines of functional test, in-circuit test, test strategy, PCB, and DFX (design for Excellence).... Projects can span any variety of technologies including RF, fluidics/pneumatics, robotics, vision systems, instrumentation, automation, industrialization, ergonomics, and rapid global deployment. This position is well-suited for an experienced project manager or a business-minded engineer who is looking to take on more responsibility for customer satisfaction and the overall success of a project.

### **Responsibilities**

You will be utilizing your technical development project management experience, your business savvy and your team leadership skills to refine & test our customer's products to allow highly efficient manufacturing. This is a high impact leadership position in a professional technical environment.

- As a Product Services Project Manager at this company you "own the project".
- In this role you team with customers and internal company manufacturing groups requiring strong communication needs!
- Participate in the business development process including initial customer meetings, capabilities presentations, technical and business discussions.
- Be a leader and decision maker in our organization.
- Experience the variety of solutions for our customers in the Medical, Defense, Wireless, Telecom, and Industrial market sectors.
- Develop the vision and direction for each project, allowing our customers products to integrate into world class manufacturing environments.
- Establish goals and develop your engineering design team.

## **Qualifications**

- Possess a Bachelor degree in Engineering or related field.
- Suggested minimum of 5 years industry experience.
- Possesses a general understanding and experience in at least one discipline (e.g. functional test, in-circuit test, test strategy, PCB, and DFX (design for Excellence).
- Possess good project management skills and knowledge of management principles.
- Ability to work in a cross-functional team environment.
- Possess strong team building and team leadership skills.
- Possess strong organization, verbal communication, written communication, presentation, and leadership skills.
- Ability to handle demanding schedules including travel to customer sites.
- Possess conflict resolution and negotiation skills.

Our client company realizes that their employees are the key to continued success. That is why they provide a stimulating environment that fosters sharing of ideas, use of the latest technology and teamwork-an environment that supports employees as they take on new challenges and celebrates their successes.

In addition to offering a competitive salary and bonus opportunities, our client offers an excellent benefits package including a discounted employee stock purchase plan, 401(k) plan, tuition reimbursement and medical, dental and vision insurance.
